

WHAT IS EMERALD ASH BORER?

The Emerald Ash Borer (EAB) Beetle came to the United States from Asia in 2002 and is now present in over half of the states. It is an insect responsible for killing tens of millions of ash trees since its arrival. They kill trees by burrowing underneath the bark and creating tunnels. Over time, the tree will no longer be able to transport nutrients and water causing it to die. Have your ash trees been marked by the city? Contact us today for a free Emerald Ash Borer treatment quote!

WHAT PEOPLE ARE SAYING ABOUT US

“

Larry is the best! Thank you for taking care of my Ash tree!

Trimming | Removal | Sustainability

WHAT DOES EAB LOOK LIKE?

These harmful beetles are emerald green and about ½ inch long as an adult. The larva is a white, worm-looking insect that lives inside the tree. You typically will not see them as they live underneath the bark. Keep an eye on your trees for these telling symptoms.

EAB SYMPTOMS

If you observe any of the following signs in your trees, please contact us immediately:

- Rapidly wilting leaves, typically starting at the top of the tree and working its way down
- Leaves are turning a discolored brown
- Leaves are quickly falling off the tree
- Underneath the bark of the tree, there may be a blue stain on the wood
- Tiny holes or complete splitting of bark
- Tunnels underneath bark with holes shaped like a “D” from the beetles exiting
- Tree suckers or “shoots” growing at the trunk
- Thinning or entirely bare tree canopy
- Increased woodpecker presence or tree damage

HOW TO MITIGATE EAB?

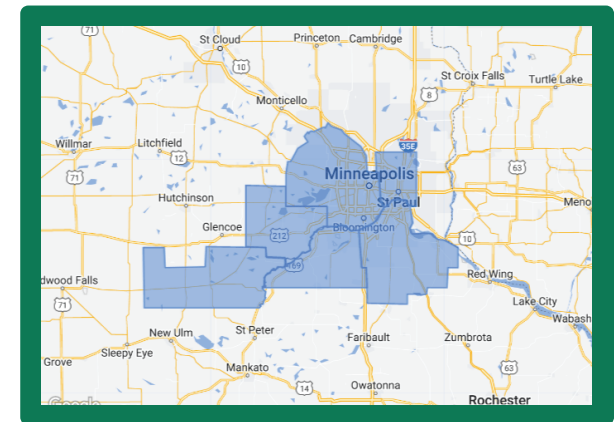

Trees need to be protected with insecticides when emerald ash borer (EAB) populations are abundant enough in an area to cause significant damage in the next year or two. Infected trees require a special EAB treatment.

WE PROFESSIONALLY TREAT EAB

Treatment options are available and can effectively control the spread of this invasive pest. Our team of experts can assess the severity of the infestation and recommend the appropriate treatment plan to protect the health and longevity of your trees. We use professional techniques and equipment to apply the treatment accurately and safely. Contact us today if your trees have been marked by the city!

EAB IS PRESENT IN THE FOLLOWING MINNESOTA COUNTIES:

- Carver
- Scott
- Hennepin
- Sibley
- Dakota
- Ramsey
